

# BERMAD Fire Protection

## Stolthaven LPG Tank Farm

Project Name	Stolthaven LPG Storage Tank Farm - 2011
Country	Singapore
Application	Monitor Valve
Segment	Fire Protection
Bermad Solution	The variation of distances of the monitors required utilizing the downstream pressure of the monitor valves as per the designed pressure regardless of the upstream pressure – an integral pressure control feature installed to enable this feature. A special PBMR (Push Button Manual Reset) Solenoid Valve installed allows remote activation and the Deluge Monitor Valves remain latched in open position until manually reset by a PB located on the Deluge Monitor Valve.
